(54) Title: A DEVICE PROVIDING QUICK AND SIMPLE ATTAINABLE DISINFECTION OR SANITARY ACTION WHEN REQUIRED

(57) Abstract: The invention refers to a device enabling sanitation of the hands of at least one person and including a container comprising the sanitary substance. Further, there is a valve making possible repeatedly distributing via an outlet of said sanitary substance. The purpose of the device is making possible sanitation of, primarily, said hands of said person at a proper moment independent of factual location of said person. The device is characterized in that said valve comprises an openable closing valve 2, 12. Said openable closing valve 2 and said outlet 3a are facing away from said person and are reachable with at least one hand of said person. Said container 1 comprising sanitary substance is pressurized, exposed to or by gravitation, or in any other way influenced to, in a single motion and immediately, distribute desired and depending on manual action time of said openable closing valve 2 amount of sanitary substance via said outlet 3a, as soon as said openable closing valve 2 is opened Said container 1 is designed to collapse essentially without letting in air to the inner of the container, when emptying said container.
